Educational Audiology FM Services Hearing Assistive Technology. Special Education School Listening

MISSION: To support school districts by providing educational audiology outreach services in order to successfully integrate children with hearing loss in the educational setting.

The **Summit Educational Audiology Program** provides compliance-based onsite, school based/educational audiology services for school districts, preschool programs, and other educational settings in order to address the needs of student who are hard of hearing or deaf or who have other auditory needs.

Educational audiologists are uniquely qualified to provide students with hearing loss access to auditory information by maximizing their auditory capabilities. IDEA (2004) defines the scope of audiology services that are to be provided to children in schools [34 CRF 300.34 (C)

Children with hearing loss deserve an opportunity to hear and learn.....achieving their dreams!
